

Merlinus Anglicus Junior;
OR, THE *756 a*
STARRY MESSENGER,
For the YEAR of our Redemption, 1756. *172465*
BEING
Bissextile, or Leap Year:

Wherein is contained,

I. Astronomical, Astrological, and Meteorological Observations.

II. The State of the Year deduced according to Art, from Solar Ingresses, Eclipses, various Configurations, Aspects and Conjunctions of the Seven Planets.

III. The Rising, Southing, and Setting of the Moon, and High Water at *London-Bridge*.

IV. Tables of the Rising, Southing, and Setting of the Seven Stars, and other Fixed Stars of Note: A perpetual Table of the Rising and Setting of the Sun, Beginning and Ending of Twilight, and Length of the Day and Night, to every fifth Day throughout the Year; with many other Tables pertinent for such a Work, all accommodated to the Meridian of *LONDON*, whose Latitude is 51 Degrees, 32 Minutes North, but will serve for any Part of *Great Britain* or *Ireland*. The like not Extant.

HENRY COLEY, Student in the
Mathematicks and the *Cælestial Science*.

All behold the Heavens, even the Works of thy Fingers, the Moon and Stars which thou hast ordained. Psal. viii. 3.

LONDON: Printed by *R. REILLY*, for the
COMPANY of STATIONERS.

Ephemerides. &c.

A perpetual TABLE of Day-break, Twi- light, &c. in the Latitude of London.

A Table of Terms and Returns for the Year 1756.

Hilary Term begins January 23, ends February 12.

Returns or Effoign Days.	Exc.	Ret.	App.	D. W.
eight Days of <i>St Hilary, Jan.</i>	20	21	22	23 <i>Frid.</i>
from the Day of <i>St Hilary</i> in 15 Days,	27	28	29	30 <i>Frid.</i>
on the morrow of the Purif. bl. <i>V. Mary, Feb.</i>	3	4	5	6 <i>Frid.</i>
eight Days of the Purif. bl. <i>V. Mary,</i>	9	10	11	12 <i>Thurs.</i>

Easter Term begins May 5, ends May 31.

from the Day of <i>Easter</i> in 15 Days,	May	2	3	4	5 <i>Wedn.</i>
from the Day of <i>Easter</i> in 3 Weeks,		9	10	11	12 <i>Wedn.</i>
from the Day of <i>Easter</i> in one Month,		16	17	18	19 <i>Wedn.</i>
from the Day of <i>Easter</i> in five Weeks,		23	24	25	26 <i>Wedn.</i>
on the morrow of the <i>Ascension,</i>		28	29	30	31 <i>Mond.</i>

Trinity Term begins June 18, ends July 7.

on the morrow of the holy <i>Trinity,</i>	June	14	15	16	18 <i>Frid.</i>
eight Days of the holy <i>Trinity,</i>		20	21	22	23 <i>Wedn.</i>
from the Day of holy <i>Trinity</i> in 15 Days,		27	28	29	30 <i>Wedn.</i>
from the Day of holy <i>Trin.</i> in 3 Weeks, <i>July</i>		4	5	6	7 <i>Wedn.</i>

Michaelmas Term begins Nov. 6, ends Nov. 28.

on the morrow of <i>All-Souls,</i>	Nov.	3	4	5	6 <i>Satur.</i>
on the morrow of <i>St Martin's,</i>		12	13	14	15 <i>Mond.</i>
eight Days of <i>St Martin,</i>		18	19	20	21 <i>Sund.</i>
from the Day of <i>St Martin</i> in 15 Days,		25	26	27	28 <i>Sund.</i>

B. No Sittings in Westminster-Hall on Ascension-Day, Midsummer-Day, and the 2d of February.

The Exchequer opens eight Days before any Term begins, except Trinity, before which it opens but four Days.

Note, That the first and last Days of every Term, are the first and last Days of Appearance.

Common Notes for the Year 1756.

A TABLE of some principal fix'd Stars, with the Time they rise, south, and set, either before or after the seven Stars; as also their Colour, Magnitude, and meridian Altitude, by which they may be readily discover'd.

Co- lour.	Mag.	Alt.	Names of the Stars	Rise.		South.		Sets.	
				H.	M.	H.	M.	H.	M.
♂	1	53	<i>Aldebaran, or Bull's Eye</i>	1	a 34	0	a 48	0	b 0
♂	1	29	<i>Left Foot of Orion</i>	4	31	1	31	1	34
♂	2	36	<i>Middle * in Orion's Belt</i>	4	13	1	51	0	35
♂	1	45	<i>Right Shoulder of Orion</i>	3	23	2	8	0	8
♂	1	21	<i>Sirius, the great Dog</i>	6	51	3	1	0	46
♂	2	43	<i>Procyon, the little Dog</i>	5	33	3	53	2	a 7
♀	1	30	<i>Heart of Hydra</i>	8	39	5	41	2	44
♂	1	51	<i>Regulus, Lion's Heart</i>	7	26	6	21	5	16
♀	1	54	<i>Deneb, the Lion's Tail</i>	8	42	7	54	7	7
♂	1	28	<i>Virgin's Spike</i>	12	46	9	38	6	36
♂	1	58	<i>Arcturus</i>	10	47	10	30	10	12
♂	1	12	<i>Antares, Scorpion's Heart</i>	17	36	12	39	7	42
♀	2	46	<i>Bright Star of the Vulture</i>	17	38	16	3	9	b 27
♀	1	6	<i>Fomahant</i>	1	14	19	11	10	37
♀	2	65	<i>Head of Andromeda</i>	19	43	20	19	2	56

THE brightest of the seven Stars is of the third Magnitude, and hath 61 Degrees of meridian Altitude, and in Colour participates of the *Moon* and *Mercury*.

2. The fix'd Stars all rise, south, and set about four minutes sooner every Night, than they did the Night before. This consider'd, the exact Time of their rising, southing, and setting, for any intermediate Night, not herein noted, may be very easily deduced from this Table, by Inspection only.

To know the Time of the rising, southing, and setting of any Star in this Table, for any Day requir'd, it is but considering how many Hours and Minutes that Star rises, sets, or sets, either before or after the seven Stars, on that Day, and you shall have your Desire; observing, that in this Table *a* stands for *after*, and *b* for *before*.

A C H R O N O L O G Y, 1756.

The Phænomena and Theory of the Tides explained and demonstrated.

TIDES are two periodical Motions of the Waters of the Sea, called also the Flux and Reflux, or Ebb and Flow: When the Motion of the Water is against the Wind, it is called a Windward Tide; when Wind and Tide go the same Way, Leeward Tide; when it runs very strong, it is a Tide-gate.

To tide it over, or up into any Place, is to go in with the Tide, either Ebb or Flood, as long as that lasts; then to stay and Anchor all the Time of the contrary Tide; and thus to set out again with the Return of the next Tide.

It is said to flow Tide and half Tide, when the Tide runs three Hours in the Offing longer than it does by the Shore: but, by longer, they do not mean more Hours; but that, if the high Water ashore at 12, it will not be so in the Offing at 3.—If it ebb and flow longer, they say it runs half Tide and half-quarter.

When the Moon is in the first and third Quarter, *i. e.* when she is New and Full, the Tides are high and swift, and called Spring-Tides;—when she is in the second and last Quarter, the Tides are lower and slower, and called Neap-Tides. Thus for the Explanation; now for the Phænomena of the Tides.—The Sea is observed to flow, for certain Hours, from the South towards the North; in which Motion or Flux, which lasts about six Hours, the Sea gradually swells; so that, entering the Mouth of Rivers, it drives back the River Waters towards their Heads or Springs. After a continual Flux of six Hours, the Sea seems to rest for about a quarter of an Hour; after which it begins to ebb or retire back again from North to South for six Hours more; in which Time the Water sinking, the Rivers resume their natural Course. After a seeming pause of a Quarter of an Hour, the Sea again begins to flow as before, and thus alternately.

Thus does the Sea ebb twice a Day, and flow as often, but not in the same Hours thereof. The Period for or of a Flux and Reflux, is 12 Hours 50 Minutes; so that the Tides run later and later by about 50 Minutes each Day.

Now

Now 12 Hours 50 Minutes is a Lunar Day. The Moon passes the Meridian later and later each Day by 50 Minutes. So that the Sea flows as often as the Moon passes the Meridian, both the Arch above, and that below the Horizon; and ebb as often as she passes the Horizon, both the Eastern and Western Point thereof.

This further Agreement we observe between the Moon and the Sea; That the Tides, though constant, are not equal; but are greatest when the Moon is in Conjunction or Opposition to the Sun, and least when in Quadrature thereto. Lastly, Those Tides are the greatest, which happen in the New and Full Moon, at the Times of the Equinoxes.—Add that the same Things are observed in most of the Coasts of *Europe*; only the Tides are so much the less, and happen the later, as the Coasts are more Northerly.

These Phænomena of the Tides are admirably accounted for from the Principle of Gravitation. All that we require to their Solution is, that the Earth and Moon, and every Particle thereof, mutually gravitate towards each other; the Reasonableness of which Assumption I shall endeavour to explain at another Opportunity.

Indeed the sagacious *Kepler* long ago conjectured this to be the Cause of the Tides: “ If (says he) the Earth ceased to “ attract its Waters towards itself, all the Water of the Ocean “ would rise and flow into the Moon: The Sphere of the “ Moon’s Attraction extends to our Earth, and draws up the “ Water.” Thus thought *Kepler*, in his *Introd. ad Theor. Mart.* This Surmise, for it was then no more, is now abundantly verified in the following Theory of the Tides, deduced by Dr. *Halley* from the *Newtonian* Principles.

The Theory of the Tides. — 1. As the Surface of the Earth and Sea is naturally globular; if we suppose the Moon A (see the following Figure) perpendicular over some Part of the Surface of the Sea, as E; it is evident the Water E, which is now nearest the Moon, will gravitate towards it more than any other Part of the Earth and Sea in the Hemisphere FEH. The Water in E, therefore, must by this Means be raised towards the Moon; i. e. it will be lighter than usual, and of Consequence will swell in E.

For the same reason the Water in G, being the most remote from the Moon, will gravitate less towards the Moon, than any other Part of the Earth or Sea in the Hemisphere G H.

The Water in G, therefore,

will approach less towards the Moon, than any other Part of the Globe; *i. e.* it must be raised the contrary Way, as being higher than usual, and will therefore swell in G.

By this means, the Surface of the Ocean must necessarily form itself into a spheroidal or oval Figure, whose longer diameter is E G, its shorter F H. And thus, the Moon, in shifting her Position in her diurnal Motion round the Earth, the Oval of Water must shift with her; by which Means are effected those two Floods and Ebbs, observable every twenty-five Hours.

2. Since, in the Conjunctions and Oppositions of the Sun and Moon, the Gravitation of the Water to the Sun concurs with its Gravitation towards the Moon; but, in the Quadratures, the Water raised by the Sun is depressed by the Moon: Hence it is that the Tides are greatest in the Solstices, and least in the Equinoxes.

In Effect, there are two Tides every natural Day from the Motion of the Sun, as there are in the Lunar Day from that of the Moon; all governed by the same Laws: Only those raised by the Sun are much less than those of the Moon; because, though the Sun be ten thousand Times bigger than the Earth and Moon, yet he is at so immense a Distance, that the Earth's Semi-diameter bears no Proportion thereto.

Hence the different Tides, depending on the particular Positions of the Sun and Moon, are not distinguished, but confounded. The Lunar Tide is somewhat changed by the Action of

of the Sun; and this Change varies every Day, by reason of the Inequality of or between the Natural and Lunar Day.

3. Since the greatest Tides about the Equinoxes (and those happening in the Syzyges) arise from the Sun and Moon being in the Equinoctial, and those about the Solstices from the Sun and Moon being in the Tropics; for this Reason, those greatest Tides about the Equinoxes are greater than those about the Solstices; since, the greater the Circle wherein the Waters move, the greater is their Agitation. And if the Moon stood still in the Pole, the Swelling would become immoveable about the Pole, and the high Water be fixed therein.

4. Since the Tides are somewhat changed by the Libration of the Waters, which use to retain a Motion impressed in them for some Time; for this Reason the highest Tides are not precisely in the very Conjunction and Opposition of the Moon, but two or three Tides afterwards.

5. Since the Sun is somewhat nearer the Earth in Winter than in Summer; hence it is, that the greatest Equinoctial Tides are observed a little before the Vernal Equinox, and a little after the Autumnal one.

6. Since the greatest of the two Tides happening in every diurnal Revolution of the Moon, is that wherein the Moon is nearest the Zenith or Nadir: For this Reason, while the Sun is in the Northern Signs, the greater of the two diurnal Tides in our Climates is that arising from the Moon above the Horizon: When the Sun is in the Southern Signs, the greater is that arising from the Moon below the Horizon.

The rest in my next.

Of the ECLIPSES.

THERE will be only two Eclipses this Year, both of the Sun, and both invisible to the Inhabitants of the Parts of the World.

The first is on *Monday* the first Day of *March*, at ten o'Clock in the Morning.

The other Eclipse happens on *Wednesday* the 25th Day of *August*, about seven in the Afternoon.

COLEY, 1756.

Observations upon the Planetary Influence at the Time
of the Sun's apparent Ingress into the Equinoctial and
Tropical Signs for the present Year of our Lord 1756.

[Of the SPRING QUARTER:

WHICH commenceth this Year on Saturday the
20th Day of March, at 51 Minutes past 3 in the
morning, apparent Time, in the Meridian of London; accord-
ing to the Astronomical Tables of the late ingenious Mr. Lead-
ster.

Scheme of the grand Radix of the Year's Revolution,
or Sol's Ingress into Aries, 1756.

In this Scheme we find *Saturn* Lord of the Ascendant, in
own Domal Dignities therein, in Trine to *Jupiter* Lord
the 10th; the *Moon* and *Mars* in Trine, and mutual
reception; the *Moon* also separating from the Trine of *Mer-*
cury, and applying to the same Ray of the *Sun*. These are
Configu-

COLEY, 1756.

Configurations of benevolent Import and Signification: But the other Hand, we find the *Sun* in Square to *Mars* his Disposer, and applying to the Opposition of *Jupiter* retrograde the eighth House; and *Mars* is in Square to *Jupiter*; and this from Cardinal Signs. Also in this Quarter, on the 24 of May, there is an Opposition of *Saturn* and *Mars* from *Leo* and *Aquary*, an Aspect of male Import and Signification and at the Lunation preceding this Configuration (which ought chiefly to be regarded) we find both the malefick Stars Angular, *Mars* in the Ascendant, and *Saturn* in the seventh, and both in mundane Square to *Jupiter* in the fourth. These Aspects and Positions of a virulent Nature, and denote great Infelicity to Mankind. I know it is usual to tax us with perpetually proclaiming ill News from the Stars. I will not answer for others: But as to myself, I take no Delight in being the Nunciature of Misfortunes to Mankind; but if the Heavens do not promise propitious Times, how can I help that? It is my Business to deliver my Message faithfully, as I receive and understand it. But this I will take Care of, that when I cannot relate any Good, I will be very short, and say as little as can be expected from one who undertakes to deliver the Language of the Stars. Some of the Places passive to these malignant Configurations, are *Italy*, *Turky*, *Sicily*, *Tartary*, *Croatia*, *Muscovy*, *Russia*, *Poland*, *Lorrain*, *Swedeland*, *Austria*, *Dalmatia*, *Rome*, *Prague*, *Bremen*, *Trent*, *Ingolstadt*, &c. These and some other Places are principally pointed at; over which they will shed their Malignity: From which Places we may expect to hear of Wars and Rumours of Wars; yea, also of Famine, Pestilence, and Earthquakes. But see ye be not troubled, saith our blessed Saviour, for all these Things must come to pass, but the End is not yet. We in England shall not so sensibly feel the Effects of War and other Calamities, as some other Nations will: And if God Almighty shew not his Anger upon us for our manifold Sins and Iniquities, we of the British Nation shall be victorious, both by Sea and Land, over our most implacable Enemies.

O happy *England*! sure, thrice happy *We*!
That enjoy Peace, Freedom, and Liberty.
What can be said of such a hellish Crew,
That Tyrants court, their Nation to subdue?

III. C

III. Of the SUMMER QUARTER :

WHICH begins on *Monday* the 21st Day of *June*, at 3 in the Morning ; at which Time the 18th Deg. of *Gemini* ascends, and the 12th Deg. of *Aquary* culminates ; the *Moon* Almuten thereof is in partile Trine of *Jupiter* ; the *Moon* is in the 11th, departing from the Trine of *Venus*, and applying to the Quartile of *Mercury* (Lord of the Ascendant) and Trine of *Mars* her Disposer. In general the Positions and Configurations of the Celestial Harbingers are more salubrious at this Ingress than at the preceding, promising Health and Prosperity both by Sea and Land : Some Kings and Potentates will use their utmost Endeavours to procure and preserve, both to themselves and their Subjects, Peace, Wealth, and Prosperity : In which good Works the august Monarch of Great-Britain will be precedent.

IV. Of the AUTUMNAL QUARTER :

WHICH commenceth on *Wednesday* the 22d Day of *September*, at 24 Min. past 4 in the Afternoon ; when the 8th Deg. of *Sagittary* culminates, and the 10th Deg. of *Capricorn* ascends ; the *Moon* is in the 10th Deg. of *Virgo* in the 7th House, applying to the Conjunction of *Venus* ; *Jupiter* Lord of the 10th is in Conjunction with *Mars* and *Mercury* in the 8th ; *Saturn* Lord of the Ascendant is in Trine to the *Sun* in the 7th. This is a very promising Ingress to all those who can be content to prune their own Vine, and sit under their own Fig-Tree ; they shall live plenteously, in Honour and Esteem, and receive much Justice from their Superiors. The Conjunction of *Jupiter*, *Mars*, and *Mercury*, will exert their Effects mostly upon the Elementary World, raising high Winds, Storms, Tempests, and Inundations, and some Pestilential Diseases ; from which *Libera nos, Domine.*

V. Of

COLEY, 1756.

V. Of the WINTER QUARTER.

THIS Quarter initiates on *Tuesday* the 21st Day of *December*, at 55 Minutes past 7 in the Morning; which Time the first Deg. of *Scorpio* culminates, and the 26th Deg. of *Sagittarius* ascends; the *Moon* is the 25th Deg. thereof, departing from the Body of *Mercury*, and applying to the Body of *Mars* in the Ascendant; *Mars* Lord of the 10th in mundane Square to *Jupiter* Lord of the Ascendant, is posited in the Angle of Honour. The Positions and Conjunctions at this Ingress denote many religious Broils and Differences, and a Popish Kingdom brought under great Tribulation and Distress. Another Year will manifest the Truth of this to a very great Surprise.
